### Job Summary

The Junior Python Engineer will assist in the development, maintenance, and support of Python applications and services that support business and operational objectives. The ideal candidate will have foundational experience in Python programming, a willingness to learn new technologies, and the ability to work collaboratively within a team environment.

### Key Responsibilities

- **Software Development:** Assist in the design, development, testing, and maintenance of Python applications and services.
- **Application Support:** Troubleshoot and resolve basic application issues and bugs under the guidance of senior team members.
- **Code Quality:** Write clean, maintainable, and efficient code while following established coding standards and best practices.
- **Collaboration:** Work closely with developers, analysts, and product teams to support project goals and deliver quality solutions.
- **API Support:** Assist with the development and integration of RESTful APIs and third-party services.
- **Database Support:** Help maintain integrations with relational and non-relational databases.
- **Documentation:** Create and maintain technical documentation related to applications, workflows, and processes.
- **Continuous Learning:** Stay current with development tools, technologies, and industry trends while actively building technical skills.

### Qualifications

- **Experience:** 0–2 years of professional experience in Python development or equivalent internship/project experience.
- **Technical Skills:**
  - Basic proficiency in Python programming.
  - Familiarity with frameworks such as Django or Flask is preferred.
  - Understanding of RESTful APIs and web services.
  - Basic knowledge of relational and non-relational databases (e.g., PostgreSQL, MongoDB).
  - Familiarity with version control systems such as Git.
  - Exposure to Docker or cloud technologies is a plus.

- **Problem-Solving:** Strong willingness to learn and develop analytical and troubleshooting skills.
- **Communication:** Good verbal and written communication skills.
- **Teamwork:** Ability to work collaboratively in a team environment and take direction from senior developers and leadership.

### Helpful Experience

- Academic or personal projects involving Python development
- Exposure to AWS Technologies (SQS, SES, DynamoDB, Lambda, MQ)
- Familiarity with ETL (extract/transform/load) processes
- Exposure to Agile development methodologies and practices
- Web scraping and data extraction experience
- Exposure to scripting languages such as Lua
- Experience using automated testing or CI/CD tools is a plus
